Product Line / Service Description

- 3M™ Scotchtint™ Window Films
- 3M™ Scotchshield™ Ultra Safety and Security Films

3M™ Scotchtint™ window film is the one building/home improvement that makes a noticeable difference both inside and out. Scotchtint film helps improve the comfort, safety, security, energy efficiency and appearance of the building/home. Scotchtint film rejects up to 79% of the heat that would otherwise come through the windows, translating into a savings of about one ton of air conditioning for every 100 square feet glass exposed to sunlight. Scotchtint film filters out 98% of the harmful UV rays, to help reduce fading and helps protect your investment in furnishings, i.e. carpeting, paneling, desks, drapes and upholstered furniture.

3M™ Scotchshield™ Ultra Safety and Security Film, a tough, new dimension in window film technology for property and personal protection against crime, violent weather and accidents. 3M's unique technology combines multiple, micro-thin layers of film to create a stronger, more impenetrable safety and security window film for unmatched levels of performance. Scotchshield window film is a tough, durable, tear and penetration-resistant shield that bonds to the inside of your windows. The film helps hold the glass together to dramatically reduce the chance of glass shards from falling or flying out.

Products applicable for the following protective glazing applications:

- Safety
- Blast Resistance
- Windstorms/Hurricane Resistance
- Seismic
