ADSI's long standing relationships with the manufacturers of security hardware and locking devices enables us to provide all of the necessary detention and security hardware components as specified.

We are especially proud of our outstanding track record in Security Glazing Field's critical area of prison and security construction. From estimating to final installation of security glazing products, we are one of the leaders of cost effective, high quality, high security design and installation. Attesting to this fact is our lasting pride in having done the required glass and glazing for federal facilities, to embassies, to many penal institutions throughout the United States.

We also have the in-house expertise to design and develop advanced entry control security systems, security monitoring systems, intrusion detection systems, touch screen and video imaging systems, secure facilities and sites, as well as, interfaces and architectures for a wide variety of security requirements. This experience includes design, development, installation and support in such areas as communications security, detention security, perimeter security, computer security, airport security and biometrics.

We can provide the much-needed one stop shopping in a very complex marketplace. The ability to control our own manufacturing schedules provides a single source responsibility for the problems that are inherent in the timely and effective completion of your security project.

Products applicable for the following protective glazing applications:

- Safety
- Attack
- Blast Resistance
- Bullet Resistance
