- [Blast Test Unprotected 1/4" Annealed Glass Video](#)

Solutia's Performance Films Division manufactures a wide variety of window films (Llumar, Llumar Magnum and Vista brands) for professional installation on glass and other smooth surfaces. Films perform a variety of functions that improve the performance an/or appearance of glass. These include 1) solar control films that reduce excessive heat gain, glare, ultraviolet, and energy costs 2) clear, high ultraviolet rejecting films that protect displays, archival materials, fine woods, fabrics, etc. from premature degradation due to ultraviolet rays 3) decorative films that provide a textured, colored, patterned or custom-designed look 4) security films that help hold broken glass together to reduce property damage and personal injury as a result of flying shards of glass 5) Anti-graffiti films that function as a removable sacrificial shield for glass, mirrors, and other smooth surfaces that are targets.

The company provides extensive technical support to the architectural and design community through its in-house engineering staff and technical website (www.llumartech.com) as well as installation coordination.

Products applicable for the following protective glazing applications:

- Safety
- Attack
- Blast Resistance
- Windstorms/Hurricane Resistance
- Seismic
